

GUIDE TO HANDLING AND STORAGE OF DEKOPRO MOULDINGS

Our mouldings are delicate and require careful handling. Please review the images on this page and adhere to the guidelines for lifting and relocating DEKOPRO mouldings. Uncontrolled bending of certain mouldings can lead to fractures. To minimize bending, always transport them in the correct manner, holding them on their sides as depicted below.

If you must transport them flat, ensure there is support in the middle of the piece, and share the load with a second person, taking care to minimize bending. Do not install any element that displays visible fractures and reach out to DEKOPRO for guidance.

Our mouldings should be stored in a dry, sheltered environment, placed flat on a level surface.
